Not Just Guards

He said the company's technology can add \$1 billion in annual sales, pointing to sophisticated tools for monitoring websites, organizing protests against clients and an Uber-like application for security forces. The company also has a division that provides training and equipment for police forces in places to work in tandem with human guards.

Demanded is growing due to terrorism, vigilante groups and increased demand for security services in poor municipalities, Jones said.

as America also enters the consulting and investigations business and even is looking for more staffing.

acquisitions are likely in coming years. Jones said more

the debt is the problem. The company has a very low debt-to-equity ratio.

While the overall security market is growing, it is not as fast as some people think. The market is about \$15 billion a year, and the company is a small part of that. The company is not a security company, but a technology company.

The company is not a security company, but a technology company. The company is not a security company, but a technology company.

Hot Seat

company does not have a strong track record in the market. The company is not a security company, but a technology company.

Its prospectus argued that the camera era "was a starting point for most products on smartphones." Its 197 million dollars in sales in 2013 were a starting point for most products on smartphones.
